PROJECTS

• Final Year Project

The title of our final year project is **Punjabi Speech Recognition**. We are going to build a speech recognition system also known as ASR system. It's an industrial project offered by Sybrid company, Karachi. We are doing this project in a group of three members as recommended by Sybrid company.

• Classify Linearly Non-separable Data

I used Artificial Neural Networks and Evolutionary Algorithm to classify the linearly non-separable data in Python. An evolutionary Algorithm is used to adjust the weights in an Artificial Neural Network.

• Face Mask Recognition

In Artificial Intelligence, I trained a model, which finds that face is with mask or not using CNN. https://github.com/Sajid-Hameed63/Face-Mask-Recognition

• Bank Management System

Bank Management System with the database connected at backend. And frontend was the website made for the bank. Bank Management System with front-end interface and back-end database using PHP, JavaScript and SQL languages.
